Claims 24-26 has been renumbered as claims 23-25 under Rule 126.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 0014128 in view of GB 2 211 093 A or Cheung et al (US 6,395,697).

Rejection is maintained for reason of record with following response.

Use of a mixture of known compounds in order to obtain a synergism, antimicrobial effect, would be a *prima facie* obviousness. Applicant asserts that example and comparative examples show the unexpected result. But, the total amount of 4000 ppm in the example is the twice the amount (2000 ppm) of the comparative examples, and thus a fair comparison cannot be made. A higher amount of antimicrobial compounds would provide a better efficacy, and thus such showing is expected contrary to applicant's assertion.

The total amount of antimicrobial compound(s) must be the same in order to see any unexpected result. Also, the scope (with respect to the amounts and ratios thereof for Triclosan and OPP) of claims is broader than the instant showing.

Applicant states that he does not follow the examiner's reasoning with respect to adding a mixture of anti-microbial agents before or during polymerization rather than

after polymerization. WO teaches polymerization of acrylic polymers at bottom of page 7, and thus addition of a mixture of anti-microbial agents before or during polymerization would be obvious to one skilled in the art since such method would provide a better (homogeneous) dispersion (molecular level) of said anti-microbial agents in a polymeric matrix than a melt mixing after polymerization. In another words, said anti-microbial agents would be better embedded in a polymeric resin matrix, and thus they would provide a longer antimicrobial effect.

WO teaches that an application of antimicrobial compound(s) to the surface provides only temporary protection at bottom of page 2, and thus use of any antimicrobial compounds used to treat the surface taught by the secondary prior art in the acrylic material of WO would be a *prima facie* obviousness.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
